Production

Wheat

The wheat harvest continues to move southward throughout the country. The following is a summary of the Secretariat of Agriculture, Livestock, Fisheries, and Food (SAGPyA) weekly report for December 1, 2005. SAGPyA estimates total planted area at 4.963 million has. As of December 1, only 714,530 has were harvested, approximately 55 percent less than the same time last year.

In Cordoba Province, harvest is almost complete. The delegations of Laboulaye, Marcos Juarez, and Villa Maria reported average yields of 1.6, 3.0, and 2.0 MT/ha, respectively. The San Francisco delegation reported variable yields of generally good quality.

Harvest in the Entre Rios Province finished with an average yield of 3.0 MT/ha of good quality. La Pampa Province experienced a delay in harvest due to last week's rains. Disparate yields are expected across the province due to the high variability of conditions found in the various lots. Average yields are expected to be between 1.4 – 1.9 MT/ha. Southern La Pampa Province suffered severely from the drought; yields are expected to be around 1.0 MT/has.

Harvest began this week in the Venado Tuerto delegation (Santa Fe Province). Depending on the damage caused by late frosts, yields ranged from 2.8 to 5.5 MT/ha. Yields in Cañada de Gomez are higher than anticipated, averaging 2.5 MT/ha, due to excellent climatic conditions after flowering and during grain fill. There have been some areas of this delegation affected by the late frost of September, but they were very few and isolated, and depend greatly on the elevation of the lots and planting dates. In Casilda delegation, harvest is moving along with the exception of the southeast Caseros department where a large area was affected by late frosts. In this area some producers may apply drying agents as some lots are showing signs of "re-sprouting". In the rest of the wheat area in Santa Fe, yields are superior to pre-harvest estimates, averaging about 3.4 MT/ha.

In the major wheat producing areas of Argentina, located in southern Buenos Aires Province, the crop is in generally good conditions. In Tandil delegation, lack of precipitation during October slightly affected the crop. Specifically in the Salado area, there are a few cases were the lack of rain affected grain fill, which will translate into a reduction in yields. Overall, however, the crop in this area is in good condition.

Lots in the Tres Arroyos delegation are very uneven in their development and health, making it very difficult to estimate yields. The majority of the crop is between the stages of spiking and filling.

Harvest began in the Junin and Pergamino delegations with yields of 3.9 and 3.5 MT/ha, respectively. A decrease in production of near 40 percent is expected in the Pigüe delegation, with respect to last year, due a drought that persisted throughout the growing season. Puan, Saavedra, Tornquist, and southern General Lamadrid are the most affected.

In the area of Salliqueló delegation, besides reductions in yields, harvested area is also estimated to decline due to drought. Many fields did not develop, while others were severely affected by the lack of precipitation. Additionally, in the areas of A. Alsina, Salliqueló, and Tres Lomas, 700 has were lost due to hailstorms on November 20 and 27.

Barley

Harvest began this week in the Buenos Aires province and is almost finished in Santa Fe. Average yields in both areas are 3.5 MT/ha. SAGPyA estimates total barley planted at 269,980 has., down slightly from last year. As of December 1, 36,110 has. were harvested.

Rice

Planting is finishing up in the Parana delegation of Entre Rios. Some producers have begun flooding their fields. SAGPyA estimates total planted area at 160,372 has (17,835 has of long-wide and 142,537 has of long-fine)

Corn

SAGPyA estimates total planted area at 3.055 million has, down slightly from last year. TO date only 2.33 million has were planted.

Planting in the Buenos Aires Province is nearly complete, with only a few lots in Salliqueló remaining to be sown. The crop is in good condition, developing normally with the most advanced fields showing 4 –6 leaves. There have been no reports of phytosanitary problems.

In Cordoba, fields in Laboulaye and Marcos Juarez delegations are developing normally, with about 10 leaves showing in the most advanced lots. On average, most fields are showing 4 – 6 leaves. In the San Francisco delegation, planting continued this week, after a pause during last week's rains.

Most of La Pampa Province benefited from last week's rains; however, the southern part of the province is still suffering from a drought. In the most advanced fields, plants have developed 4 –6 leaves.

Santa Fe Province also benefited from last week's rains with the crop showing 6-10 leaves, depending on the planting date. No plagues or phytosanitary problems have been reported. Avellaneda and Rafaela delegations are finishing up late planting on a few lots.
